Vedant Kansara

(437)-249-3899 | vedant.kansara@mail.utoronto.ca | Portfolio | LinkedIn | GitHub

Education

University of Toronto St. George Toronto, ON
Bachelor of Computer Science: Data Structures, Algorithms, OOP, Linear Algebra, Data Science

Technical Skills

Languages: Java, Python, JavaScript, TypeScript, C, C++, C#, R, HTML/CSS, SQL, Bash, DAX
Technologies: Git, AWS, GCP, Azure, MCP Servers, Docker, Kubernetes, Redis, Supabase, MongoDB, PowerBI, Excel
Frameworks & Libraries: React, Node.js, Next.js, Express.js, Tailwind, Flask, TensorFlow, OpenCV

Experience

Co-Founder (Founding Engineer) Feb. 2024 – Present
MiniAI — *Next.js, Scikit-learn, AWS, Vercel* *Toronto, ON*

- Leading operations of an **AI Education Startup** reaching **1000+** students and developing **scikit-learn** ML teaching models
- Formed partnerships with engineers from **Meta**, **Microsoft** and **Amazon** to conduct virtual and in-person workshops
- Built a full-stack **AI learning platform** with **React, TypeScript, Vite, and Express**, serving **1,000+ monthly active users** through **10+** challenge games while generating certificates daily: **Demo**
- Developed the company website using **Next.js** while deploying on **AWS ECS** and **Vercel**, making end-to-end migrations using **CI/CD pipelines** with **Github Actions** to ensure **99.9%** runtime and expand user-base by **45%**

Data Engineering Intern May. 2026 – Aug. 2026
S&C Electric Canada — *Python, Azure, Apache Airflow, SQL, PowerBI, Databricks, Oracle, React* *Toronto, ON*

- Built an **ETL pipeline** with **Python**, **Azure** and **Apache Airflow** to load **20+ years** and **3.6M+ rows** of Switchgear and Vista component data into the **PowerBI** Sales Dashboard for cost analysis, reducing ingestion time by **33%**
- Scraped unstructured data from **RESTful APIs** and transformed it into cleaned **dimension tables** using **requests** and **pandas** while loading into **Azure SQL**, cutting manual data work by **42%** for Mechanical Engineers and Analysts
- Built **Apache Airflow DAGs** to orchestrate and **parallelize ETL workflows**, increasing data throughput by **28%**
- Architected a **Semantic Data Model** by connecting tables from **Oracle, Databricks, Excel** and **Azure SQL**, through **querying, indexing**, and writing **DAX measures**, to support **3+ PowerBI dashboards** containing **15M+** records
- Designed a **React** switchgear comparison tool to analyze price differences, saving the company **$75,000+** per year

Software Engineer Jan. 2026 – Apr. 2026
Atelier — *AWS, Node.js, Redis, LangChain, Docker, Azure* *Toronto, ON*

- Worked at an **AI-driven product analytics start-up** backed by **Telora** with **$60,000** in funding to design an **end-to-end analytics pipeline** that ingests website data from any provider into an **LLM**, and returns automated **UI/UX changes**
- Developed an AI-driven feature generation engine using **LangChain** to analyze **website structure for improvements**
- Automated deployments with **Docker** and **Azure DevOps** CI/CD pipelines, boosting release frequency by **20%**

Software Engineering Intern May. 2025 – Aug. 2025
Coding-Campus — *React, Supabase, Python, Vercel, OpenAI, Judge0, Selenium, Beautiful Soup* *Toronto, ON*

- Deployed a full-stack **AI Coding Contest Prep App** using **React**, **Supabase** and **Vercel** to prepare **200+** students
- Engineered **3+ Supabase Edge Functions** with **Judge0** and **OpenAI APIs**, and **React Monaco Editor** to power an in-browser **coding terminal** executing **Java, Python** and **C++** solution submissions while generating **AI feedback**
- Created a data pipeline to scrape web contest data using **Python, Selenium, Beautiful Soup** and **Apache Airflow**, and load into **PostgresSQL**, processing **1,500–2,000** unstructured documents (HTML, PDF, SharePoint) per ingestion cycle

Projects

Premiere (Hack the Valley 11 Winner) | *Python, FastAPI, Raspberry Pi, SwiftUI, ARKit, Three.js, LiDAR* Oct. 2026

- Selected as a **2x track winner** against **750+ hackers** and **100+ teams** at one of Canada's largest hackathons for building a **Property Redevelopmemt Platform**, winning **3rd Overall** and **1st** for the **UofT School of Cities** prize: **Devpost**
- Built a **Python/FastAPI 3D reconstruction pipeline** converting iPhone **LiDAR** depth data and **ARKit** camera poses into spatial point clouds, integrating **COLMAP** and **Gaussian Splatting** for property visualization
- Developed an interactive **Three.js digital-twin platform** alongside a **Raspberry Pi robotics system** to inspect and model building interiors, **annotate structural concerns**, and visualize redevelopment scenarios using procedural 3D models.

HCP Schematic-to-Fetch (Hack the North 2026) | *Python, Flask, Kimi K2.6, AprilTags, OpenCV* Sep. 2026

- Selected to attend **Canada's largest hackathon**, joining **1,000+** hackers to develop a **robotics system** using **Hardware Context Protocol (HCP)** that processes **circuit schematics** and **autonomously** retrieves materials: **Devpost**
- Engineered an **LLM ingestion pipeline** using **Python** and **Kimi K2.6** to process **multimodal PDF** schematic inputs
- Programmed a **DJI RoboMaster EP** with **OpenCV**, **AprilTags** and **Flask** for autonomous navigation and localization
