EDUCATION

University of Toronto St. George

Toronto, ON

Bachelor of Computer Science, Computer Science Specialist + Statistics Minor

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, C, C++, C#, R, HTML/CSS, SQL, Bash, DAX

Technologies: Git, AWS, GCP, Azure, MCP Servers, Docker, Kubernetes, Redis, Supabase, MongoDB, PowerBI, Excel

Frameworks & Libraries: React, Node.js, Next.js, Express.js, Tailwind, Flask, TensorFlow, OpenCV

EXPERIENCE

Co-Founder (Founding Engineer)

February 2024 – Present

MiniAI — Next.js, Scikit-learn, AWS, Vercel

Toronto, ON

- Leading operations of an **AI Education Startup** reaching **1000+** students and developing **scikit-learn** ML teaching models
- Formed partnerships with engineers from **Meta**, **Microsoft** and **Amazon** to conduct virtual and in-person workshops
- Developed the company website using **Next.js** while deploying on **AWS ECS** and **Vercel**, making end-to-end migrations using **CI/CD pipelines** with **Github Actions** to ensure **99.9%** runtime and expand user-base by **45%**

Data Engineering Intern

May 2026 – August 2026

S&C Electric Canada — Python, Azure, Apache Airflow, SQL, PowerBI, Databricks, Oracle, React

Toronto, ON

- Built an **ETL pipeline** with **Python**, **Azure** and **Apache Airflow** to process **20+ years** and **3.6M+ rows** of Switchgear and Vista component data and load it into the **PowerBI** Sales Dashboard for cost analysis, reducing ingestion time by **33%**
- Scraped unstructured data from **RESTful APIs** and transformed it into cleaned **dimension tables** using **requests** and **pandas** while loading into **Azure SQL**, cutting manual data work by **42%** for Mechanical Engineers and Analysts
- Built **Apache Airflow DAGs** to orchestrate and **parallelize ETL workflows**, increasing data throughput by **28%**
- Architected a semantic model by integrating **Databricks** and **Oracle** tables and optimizing **SQL queries and indexing**
- Designed a **React** switchgear comparison tool to analyze price differences, saving the company **\$75,000+** per year
- Built data visuals in **PowerBI** and **Excel**, highlighting trends using **DAX measures** for **3M+** historical sales records

Software Engineer

January 2026 – April 2026

Atelier — AWS, Node.js, Redis, LangChain, Docker, Azure

Toronto, ON

- Worked at an **AI-driven product analytics start-up** backed by **Telora** with **\$60,000** in funding to design an **end-to-end analytics pipeline** that ingests website data from any provider into an **LLM**, and returns automated **UI/UX changes**
- Developed an AI-driven feature generation engine using **LangChain** to analyze **website structure for improvements**
- Automated deployments with **Docker** and **Azure DevOps** CI/CD pipelines, boosting release frequency by **20%**

Software Engineering Intern

May 2025 – August 2025

Coding-Campus — React, Supabase, Python, Vercel, OpenAI, Judge0, Selenium, Beautiful Soup

Toronto, ON

- Deployed a full-stack **AI Coding Contest Prep App** using **React**, **Supabase** and **Vercel** to prepare **200+** students
- Engineered **3+ Supabase Edge Functions** with **Judge0** and **OpenAI** APIs, and **React Monaco Editor** to power an in-browser **coding terminal** executing **Java**, **Python** and **C++** solution submissions while generating **AI feedback**
- Created an analytics pipeline to scrape **5+ years** of past contest data using **Python**, **Selenium**, and **Beautiful Soup** and load into **Supabase PostgreSQL**, improving AI training accuracy by **45%**

PROJECTS

UFC-Analytics-Platform

| React, SpringBoot, PostgreSQL, Python, Beautiful Soup, Selenium, Apache Airflow July 2026

- Engineered a full-stack **UFC Fighter Analytics** application with **React**, **SpringBoot**, and **PostgreSQL**, developing **RESTful APIs** and **CRUD** functionality for managing and analyzing fighter performance data
- Built an automated analytics pipeline using **Python**, **Beautiful Soup**, **Selenium** and **Apache Airflow** to scrape the latest web data on a schedule and load them into a **PostgreSQL** table schema for **1000+** fighters and **20+** different attributes

ML-Learn-AI

March 2026

- Built a full-stack **AI learning platform** with **React**, **TypeScript**, **Vite**, and **Express**, serving **1,000+** monthly active users through **10+** challenge games while generating certificates daily: [Demo](#)
- Integrated the **Gemini API** and a **PDF workflow** for AI-assisted lessons and automated certificate generation
- Developed browser-based modules with **TensorFlow.js**, **face-api**, and the **Web Speech API** for interactive lessons

ColourMash

August 2025

- Built an **interactive memory game** using **Next.js** tailored to Alzheimer's patients at Ignition Hacks: [Devpost](#)
- Added **5+ OpenAPI** endpoints for personalized feedback and **MySQL** to store time-series memory metrics and user-specific prediction history for **100+** users
